

Progress Photographs – February 2008

The bulk excavation to the site of the new sports centre is almost complete with piling operations to the pool area underway.

Foundations are being cast to the central section that will accommodate the future fitness area, entrance and cafe. The removal of the old tiles to the lido is also underway, which will allow for investigation surveys to be carried out to determine the extent of repair work necessary for the renovation of the lido that will enable it to be brought back into use as a fully operational outdoors pool.
