	Table 3.1 Recommendations for proposed new/extended SINC's	7

1 Introduction

- 1.1 LUC was appointed in June 2015 to undertake a review of Sites of Importance for Nature Conservation (SINCs) in the London Borough of Hillingdon (LBH). This was specifically to assess proposed SINCs which were identified in 2005 by the London Ecology Unit of the Greater London Authorities as either new SINCs or extensions to existing SINCs. These had been included in Hillingdon's emerging Local Plan Part 2: Site Allocations and Designations documents which were issued for consultation in September 2014. A number of representations were received relating to these proposed new/extended SINCs and therefore the LBH undertook to review the 2005 recommendations, with updated surveys to be undertaken to confirm the value of the sites and whether designation was warranted. The study was not required to review existing SINCs.

2 Method

Data Review

- 2.1 Information made available by LBH was reviewed by LUC to provide background to the surveys. The background to the project was also discussed at an Inception Meeting (19 June 2015). Information reviewed included:
- Hillingdon's emerging Local Plan Part 2: Site Allocations and Designations documents¹
 - GIS datasets comprising existing SINC designations and proposed new/extended SINC boundaries
 - 2005 survey conclusions comprising a citation for the proposed new/extended SINC (scanned copy of original hard copy)
 - Citations for original SINC designations in Hillingdon²

Site Survey

- 2.2 All proposed new/extended SINC as identified in 2005 were surveyed, subject to access, in accordance with the Greater London Authority's *Open Space and Habitat Survey Methodology*. This method was developed to enable the assessment of sites in London as potential SINC³.
- 2.3 Surveys were undertaken on 27 July – 30 July, and 14 August 2015 during fine weather conditions. Surveys were undertaken by experienced ecologists, including Sophie Puntney BSc GradCIEEM GradEECW, Rebecca Turner BSc MSc and Peter Lawrence BSc MSc MCIEEM.
- 2.4 The surveys involved collection of data relating to a range of site attributes ranging from land use, access and management, to the habitats present and their percentage cover. Such data is collected for survey parcels which are identified as broadly homogenous areas of habitat, so that one site may comprise a single parcel (for example if the whole area supports woodland or is of a uniform character) or as a number of parcels if different areas of distinct habitat character are identified. For particularly complex sites which comprise a mosaic, the site may be mapped as a single parcel, based on land use or management, such as a golf course. Detailed plant species lists were only collected for particularly notable habitats as per the GLA method, such as acid grassland sites. In accordance with the GLA method, sites were broadly classified according to habitat type.
- 2.5 A GIS-linked Access database was developed based on the GLA survey form, and this was uploaded to a tablet computer for the direct, efficient recording of data in the field.
- 2.6 The parcels as identified in 2005 (GIS shapefiles provided by LBH) were used as the basis for the 2015 surveys, although where necessary these were amended. For example, in some cases parcel boundaries were adjusted to better reflect the open space boundaries (perhaps as a result of changes to the site area or errors of previous digitisation); in other cases parcels were removed as the sites had since been developed. Any such changes were added to the GIS shapefile attributes, for example rather than simply deleting shapefiles where open space was no longer present or areas had been digitised in error, to ensure a clear 'paper-trail' regarding 2015 recommendations.

² Greater London Council, 1988, Nature Conservation in Hillingdon

³ For further detail see the Mayors Biodiversity Strategy Appendix 4: http://legacy.london.gov.uk/mayor/strategies/biodiversity/biodiversity_strategy.jsp

- 2.7 Information regarding ownership and access to sites was limited and therefore surveyors reviewed OS Base Mapping to identify public footpaths and used judgement on the ground to determine whether sites were publically accessible prior to survey. If there was no clear public access, attempts were made to view the site from adjoining publically accessible land, or by other means. For example, in one case track-side land was viewed from passing trains as no other access was available.

Site Assessment

- 2.8 The proposed new/extended SINC^s (as identified in 2015) were assessed against a consistent and well-established methodology and set of criteria as established by the London Wildlife Sites Board and published in 2011⁴. Criteria considered when assessing the sites included the following (as appropriate given the nature of the site):

<i>Representation</i>	<i>Recreatability</i>
<i>Habitat rarity</i>	<i>Typical urban character</i>
<i>Species rarity</i>	<i>Cultural or historic character</i>
<i>Habitat richness</i>	<i>Geographic position</i>
<i>Species richness</i>	<i>Access</i>
<i>Size</i>	<i>Use</i>
<i>Important populations of species</i>	<i>Potential</i>
<i>Ancient character</i>	<i>Aesthetic appeal</i>

- 2.9 Given the nature of these criteria, and also the rapid nature of the survey method, assessments were subjective and based on the professional judgement of experienced ecologists. Following the surveys a workshop was held between the surveyors and the Project Manager to ensure consistency during the assessment.
- 2.10 Where access was not available to a site, and it was not possible to view enough of the site to reach a robust conclusion regarding its value, the proposed new/extended SINC^s were recommended for removal. However, it is important to note that this does not necessarily mean that there are no features of ecological value associated with the site and it is therefore recommended that such sites are monitored and included as part of the next SINC review.
- 2.11 On the basis of the above assessment, those proposed new/extended SINC^s recommended for designation were classified as follows in accordance with the Mayor's Biodiversity Strategy and London Plan:
- Metropolitan importance
 - Borough Grade 1 importance
 - Borough Grade 2 importance
 - Local importance
- 2.12 As requested by LBH and in accordance with the approach taken in the 2014 Local Plan Part 2: Site Allocations and Designations consultation document, these were also grouped as Grade 1 (Metropolitan, Borough Grade 1) and Grade 2 (Borough Grade 2 or Local) new/extended SINC^s.

Limitations

- 2.13 There was limited information available regarding the 2005 recommendations. In some cases it was not possible to match up the GIS shapefiles with the 2005 citations provided, as site

⁴ <http://www.london.gov.uk/priorities/environment/greening-london/biodiversity/sites-importance-nature-conservation>

identifications (GIS IDs or names) did not correspond between the two datasets. In addition, there was no additional background information to support the citations (such as previous survey data or rationale for recommendation), and in some cases the citations did not make clear the reason for the change (for example if extension was recorded). However, all new/extended sites identified in the GIS datasets were surveyed, subject to access, and therefore surveyors were able to undertake an independent assessment.

- 2.14 Access was not available to a relatively large proportion of the proposed new/extended SINC or parcels. As above, where access was not available and views in to the site were restricted, these sites were recommended for removal as a robust assessment could not be reached to determine whether the conditions recorded in 2005 remained.

3 Survey Findings and Assessment

- 3.1 The survey proformas are provided in **Appendix 1**. **Appendix 2** provides mapping summarising the recommendations, identifying existing SINC; proposed new/extended SINC recommended for removal (due to low value or insufficient access); and Grade 1 (Metropolitan, Borough Grade 1) and Grade 2 (Borough Grade 2 or Local) new/extended SINC. Further detail regarding the recommended level of designation for each site (Metropolitan, Borough Grade 1, Borough Grade or Local) is provided in the GIS linked database.
- 3.2 Further detail regarding the assessment conclusions are provided in **Table 3.1** below. For context, this includes a summary of the original citation (where available and applicable to those sites recommended for extension); and where available the rationale for the 2005 recommendation.

Summary

- 3.3 In summary, **37 proposed new/extended SINC were considered in 2015**. Note that this figure varies from the figure identified in 2005. This is because following survey in 2015 a number of the sites identified in 2005 were split to create separate sites given the geographical isolation of parcels, or to better reflect the character of separate parcels.
- 3.4 Of the 37 sites, **11 were recommended for removal in their entirety**. Of these, eight were recommended for removal as the ecological value as identified in 2015 did not warrant designation; whilst the remaining three were recommended for removal due to a lack of access which meant that robust conclusions could not be reached regarding their quality.
- 3.5 **Twenty-six proposed new/extended SINC have been recommended for designation in 2015** at some level given their quality. However, of these, 12 were recommended for partial removal. Certain survey parcels were either considered to be of insufficient ecological value to warrant designation; others could not be accessed; or some parcels appeared to have been identified for designation in 2005 in error (perhaps as a result of digitisation errors).
- 3.6 As above, it is important to note that sites recommended for removal given lack of access may support features of ecological value, and it is therefore recommended that such sites are monitored and included as part of the next SINC review.
- 3.7 The 26 recommended proposed new/extended SINC include the following levels of designation:
- **2 Sites of Metropolitan Importance (both extensions to existing SINC)**
 - **9 Sites of Borough Grade 1 Importance (5 new and 4 extensions)**
 - **10 Sites of Borough Grade 1 Importance (6 new and 4 extensions)**
 - **5 Sites of Local Importance (5 new)**

Table 3.1 Recommendations for proposed new/extended SINCS

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
1	Wall Garden Farm Sand Heaps	HiBI 19		New	Grade 1	A series of large sand heaps associated with adjacent active gravel workings. These support a breeding colony of sand martins and are said to be have been left <i>in situ</i> by the contractors for this reason. The extensive reseeded grassland and ruderal areas to the north and east, along with included operational silt pits, provide habitats likely to give rise to a large biomass of invertebrate aerial "plankton", and are included as likely feeding grounds for the sand martins. Skylarks are currently present in this grassland, although their breeding status is unknown.	Remove	Remove	No access. Viewed from the road, appears to remain an active minerals site, with apparent changes to areas being worked and those areas vegetated. Significant working to the sand heaps is likely to have reduced the value of the habitat. Site was not accessible at the time of survey and a SINC designation cannot therefore be supported. This does not necessarily mean that there are no features of ecological value. The site should be monitored and included as part of the next SINC review.	N/A
2	Haste Hill and Northwood Golf Courses, and Northwood Cemetery	HiBI 09	The two golf courses are adjacent to Copse Wood and Park Wood NNR. Streams from the golf courses enter the NNR to the west and so maintaining water quality is important. The sites are composed of a mosaic of fragmented secondary woodland (some wet), coniferous woodland, acid grassland strips along the woodland edges, semi-improved neutral grassland (some wet), bracken, hedge, scrub, bare soil, golf fairways and small watercourses. A single woodland flush is present in the south west with galingale <i>Cyperus longus</i> , present along with other characteristic species. Hornets <i>Vespa crabro</i> , are present and there is a good range of standing decaying timber.	Addition	Grade 1	The site is redefined to include all tree masses, scrub, rough grassland and seasonal and permanent drains and watercourses and their riparian zones, but excluding the frequently-mown golf course greens and fairways. It would be a high priority to allow the development of 3m+ rough grassland riparian strips along the streams to protect them from pollutants in run-off from the greens. Northwood cemetery is added. Adders, grass snakes and slow-worms are seen fairly regularly in the cemetery by Local Authority staff, who are apparently able to distinguish between these reptiles. A large semi-permanent pile of leaf litter to the west may provide breeding habitat for adders. Part of Northwood Recreation Ground is added to include three mature black poplars <i>Populus nigra betulifolia</i> , a species-poor grassland flush (which would benefit from sympathetic management) as well as native hedges and trees.	New	Grade 2	Golf courses and cemetery as previously described. Habitats not particularly unusual in their own right, but the mosaic of habitats likely to support a wide range of wildlife particularly given adjacent designated sites. Sports pitch in east of the site does not provide ecological value and is recommended for removal. Recommend that the site is added as a New SINC of Borough Grade 2 value.	84.83
3	St Vincent's Hospital Meadow	HiBII 22	Composed of scattered trees, bramble scrub, semi-improved neutral grassland, roughland, ruderal, bare soil and amenity grassland. The field is rich in butterflies and grasshoppers. Borders Park Wood NNR to the west.	Addition	Grade 1	A field to the south-west of the hospital is added to the site. This false oat-grass <i>Arrhenatherum elatius</i> , and perennial rye-grass <i>Lolium perenne</i> , dominated area has relatively rich flora, including abundant crested dog's-tail <i>Cynosurus cristatus</i> , as well as pineappleweed <i>Matricaria discoidea</i> , common centaury <i>Centaureum erythraea</i> , red clover <i>Trifolium pratense</i> , smooth tare <i>Vicia tetrasperma</i> , and small melilot <i>Melilotus indicus</i> . Its southern aspect and path-adjacent bare soil provide nesting sites for fossil solitary <i>Aculeates spp.</i> , while pedunculate oaks <i>Quercus robur</i> , dog rose <i>Rosa canina</i> , and common hawthorns <i>Crataegus monogyna</i> , grow as probable hedgerow remnants on the south margin. The site is contiguous with Park Wood NNR to the west and is likely to provide a range of resources, including nectar sources, for scarce woodland insects associated with the NNR. The south meadow has been redefined as a smaller area as a result of encroachment from new housing to the south. The area to the north of the hospital is redrawn to exclude a vehicle access route and car park.	Remove	Remove	Although the habitats and species recorded in 2015 were similar to those recorded in 2005, the habitats and, particularly the grassland, were not particularly species-rich or structurally diverse, and did not support any notable species, representing habitats relatively common and widespread in the Borough. In addition, the immediate surroundings supported abundant open space and habitats of much greater ecological value. No features of particular ecological value were recorded on the site itself in 2015. Recommend for removal.	N/A

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
4	New Years Green	HiBI 08	Composed a broadleaved secondary woodland (planted in the late 19th century), herb-rich semi-improved neutral grassland, scrub, tall herbs, hedges and ditches. Woodland is fairly species rich and includes the locally scarce buckthorn <i>Rhamnus catharticus</i> , as well as hazel <i>Corylus avellana</i> , and spindle <i>Euonymus europaeus</i> . The field to the north-east of the wood is an unimproved, horse-grazed pasture, with a central area of herb-rich grassland. Locally rare species, such as sneezewort <i>Chillea ptarmica</i> , have been recorded here. This area is bordered by scrub and tall herbs.	Addition	Grade 1	The ditch, hedgerows and the fields to the north and west of Newyears Green Covert have been added to the SINC. These appear to reasonably species-rich and include greater stitchwort <i>Stellaria holostea</i> , upright hedge parsley <i>Torilis japonica</i> and the locally uncommon bearded couch <i>Elymus caninus</i> . Mature hedges, which include sessile oak <i>Quercus petraea</i> , and a partially water-filled ditch, form a boundary to the northern edge of this section. Another locally scarce species, musk thistle <i>Carduus nutans</i> , is in the field between the ditch and the Highway Farm buildings. A badger sett is present near the farm entrance, off Harvil Road. Deer, badger, rabbit, house martin, green woodpecker, jay and blue tit are known to frequent the site.	Remove	Remove	The habitats recorded on the site in 2015 were common and widespread habitats within the Borough, dominated by improved grassland with hedgerows and scattered trees. The habitats, in particular the grasslands, were species-poor with only common species recorded. This may be as a result of management practices to support grazing, with the site also subject to frequent disturbance from vehicles, with frequent fly-tipping along hedgerows. In addition, the site did not appear particularly accessible and did not therefore provide a resource for the local community. Recommend for removal.	N/A
5	Herlwyn Park Recreation Ground and Railway Banks	HiBII 35		New	Grade 2	The railway embankments comprise dense trees and scrub with pedunculate oak, silver birch, blackthorn, <i>buddleia</i> , false acacia, rank ivy and black bryony. Standing decaying timber is present and the scrub is likely to provide shelter and feeding habitats for a range of birds, mammals and invertebrates. The park comprises areas of amenity grassland, with rugby pitches used by Ruislip RFC, partially divided by tree-lines. These include old (probably historically pollarded) pedunculate oaks, providing potentially important saproxylic habitats. An over-grown hedgerow with trees, including hornbeam, marks the east boundary of the site. The grassland itself is not considered to be on conservation interest. There are good rough grassland and scrub habitats at several points on the perimeter, including flora such as cow parsley, ground ivy, field rose and caper spurge. The local hoverfly <i>Didea fasciata</i> occurs here. On the south margin there is a large vegetated mound with elm.	New	Grade 2	Similar as previously. Recommend that the site is added as a New SINC of Local value.	7.63

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
6	Fore Street Meadows	HiBII 44		New	Grade 1	Situated on the eastern margin of Park Wood NNR, this site comprises two fields of horse-grazed, semi-improved neutral grassland, scattered trees, hedges, ruderal, roughland and a ditch. The grassland is dominated by false oat grass <i>Arrhenatherum elatius</i> , with cock's-foot <i>Dactylis glomerata</i> , and common couch <i>Elytrigia repens</i> . Additional ground flora includes curled dock <i>Rumex conglomeratus</i> , bittersweet <i>Solanum dulcamara</i> , hairy willowherb <i>Epilobium hirsutum</i> , and hogweed <i>Heracleum sphondylium</i> . The native hedges are dominated by common hawthorn <i>Crataegus monogyna</i> , and blackthorn <i>Prunus spinosa</i> , with some elder <i>Sambucus nigra</i> . There are a small number of large pedunculate oak trees <i>Quercus robur</i> , in the horse-grazed northern meadow, including large standing dead and decaying timber. The public footpath in the centre of the site is lined with common flora such as cow parsley <i>Anthriscus sylvestris</i> . The south meadow does not appear to have been grazed for some time and the false-oat grass is interspersed with scrub and tall herbs, such as blackthorn, stinging nettle <i>Urtica dioica</i> , and wood dock <i>Rumex sanguineus</i> . There is a recently-laid native hedge by the roadside to the south. Situated near the south end is a vegetated ditch and associated damp areas, dominated by floating sweet-grass <i>Glyceria fluitans</i> . Both of these are likely to provide habitats for a range of invertebrate species. The value of these sites is increased by their proximity to Park Wood, as they provide an important buffer zone to this NNR. In addition to habitats for saproxylic (dead wood) and wetland invertebrates, the site is likely to provide nectar sources and swarming sites for scarce and rare invertebrates associated with ancient woodland.	Remove	Remove	The site was dominated by neutral grassland of low species diversity and no notable species recorded. It is possible that the grassland has been improved since 2005 to provide pasture, or simply that the high levels of horse grazing have reduced the value of the grassland. The grassland habitats, and small areas of other habitats (woodland, trees and scrub) are common habitats in the Borough, with extensive areas of higher quality habitats present in the wider area. In addition, the site had no public access and did not provide a resource for the local community, with other public open spaces present in the vicinity. Recommend for removal.	N/A
7	West Ruislip Golf Course and Old Priory Meadows	HiBI 14	The golf course and surrounding habitat comprises a diverse mosaic of herb-rich semi-improved neutral grassland, hedge, broad-leaved secondary woodland, scattered trees, scrub, standing water, swamp, running water, tall herbs, ditches and amenity grassland. Great crested newts have previously been seen in a small pond near the railway line. The railway embankment is species-rich with a range of tall herbs and scattered shrubs and trees.	Extension	Grade 2	The area to the west of the River Pinn comprises and old meadow with a rich plant diversity and two narrow fields. To the east of these fields is the River Pinn. The section of river to the north has been dredged in the past and is relatively species-poor but has occasional water chickweed <i>Myosoton aquaticum</i> , which is a locally scarce species. The southern section of the river, beside the golf course, is a rich wetland habitat, enhanced by adjacent wet grassland and a drainage ditch. The river supports water-starwort, brooklime, and fools water-cress, with meadowsweet, common fleabane and hemlock occurring along the banks. The wet grassland is dominated by meadowsweet, tufted hair-grass, gipsywort, red clover, stinging nettle and common knapweed. The ditch supports abundant floating sweet-grass and water-starwort, along with water plantain, fleabane and marsh woundwort.	Extension	Grade 2	Partial access available. The habitats appeared to be of a similar condition to that recorded in 2005. The site provides a diverse habitat mosaic comprising the river and associated wetland habitats (similar species present as 2005), relatively species-rich semi-improved neutral grassland, with mature trees and dense and scattered scrub. The site is also important in terms of providing habitat connectivity along the River Pinn. There is also good public access to the north of the site via a footpath along the river, providing access to nature and a countryside feel. Recommend include as extension, Borough Grade 2.	9.55

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
8	Ickenham Marsh Complex	HiBI 13		Addition	Grade 1	The site forms a diverse landscape of ancient and secondary woodland (some wet), scattered trees, scrub, tall herbs, herb-rich semi-improved neutral grassland, roughland, ruderal, amenity grassland, hedge, bracken, running water, standing water, swamp, reed bed and bare soil. There is an extensive complex of fields, divided by hedges, woodlands, riverine and wetland features. These fields comprise a mosaic ranging from under-grazed to over-grazed (by horses) and also include roughland and meadows which undergo sporadic hay cropping. Wet habitats include seasonal and marshy ditches along some hedgerows, the damp woodland of Freezland Covert and a pond with a large permanent flush supporting at least five species of rush. A wide range of butterflies, hoverflies, crane flies and solitary aculeates have been recorded. Sparrowhawks and buzzards are also present.	Extension	Grade 1	Generally agree with previous assessment, with two parcels complementing connectivity along the stream, and two providing valuable habitat as extensions to existing fields. A further two parcels could not be accessed, and therefore designation of these parcels cannot therefore be supported (this does not necessarily mean that there are no features of ecological value, and the site should be monitored and included as part of the next SINC review). Recommend including certain parcels as extensions, Borough Grade 1.	36.63
9	River Pinn Corridor near Kings College Playing Fields and Manor Farm	HiBII 51		New	Grade 2	Habitats include scattered trees, hedge, scrub, herb-rich semi-improved neutral grassland (some wet), amenity grassland, tall herbs, running water and ditches. This stretch of the River Pinn corridor is flanked by rough grassland, hedgerow and wetland features. Much of it has dense belts of native scrub, trees and other vegetation on both banks. The area supports a good diversity of invertebrates and birds, including grey wagtail which is an amber list species. Crack willow, weeping willow, pedunculate oaks and blackthorn grow here, as well as extensive patches of stinging nettle and Indian balsam and occasional hedge bedstraw and wall speedwell. To the west of the grasslands there are wetland areas on both sides of the river, comprising a flushed area, ditches and a copse of grey willow. Flora in this area includes yellow iris, soft rush, compact rush, jointed rush, hard rush, slender tufted-sedge, sheep's sorrel and marsh foxtail. Action to restrict outflow from the ditches would help to conserve and enhance the high value wet grassland features and would delay seasonal drying of the ditches. The native hedge fragments, rough grassland, trees and large decaying timbers on the margins of Ruislip Cricket Club are included in the site, although the cricket pitch is excluded.	New	Grade 1	Broadly agree with previous assessment, with the mosaic of habitats along the River Pinn providing a potentially valuable wildlife corridor. Recommend designation as a New SINC of Borough Grade 1 value.	11.67
10	Yeading Brook & Minet Country Park			Addition	Grade 1		Extension	Grade 1	Series of open spaces supporting a diverse habitat mosaic along watercourses (Yeading Brook and Grand Union Canal) providing a potentially valuable wildlife corridor between other existing SINCS. Includes a large parcel associated with Minet Country Park previously suggested along with Hitherbroom Park. These should be treated as separate designations (see site 12). Recommend designation as extension, Borough Grade 1.	73.37

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
11	Cavendish Recreation Ground	HiL 12		New	Grade 2	Composed of scattered trees, hedge, scrub, tall herbs, semi-improved neutral grassland, planted shrubbery, ruderal, amenity grassland. There is a high diversity of birdlife, including the red-listed song thrush, as well as solitary bees and other invertebrates. This recreation ground is bordered by access ways behind mixed native and non-native hedges. To the north, an unsurfaced track provides habitat for a range of ruderal species and native plants, including winter heliotrope, garden angelica and silverweed. To the south margin, the hedge borders a secluded footpath with lord-and-ladies, ivy-leaved speedwell and dog rose. There is a seasonal ditch with hoary pepperwort, common vetch and hairy sedge. Grasslands and scattered trees in the south include weeping willow, meadow foxtail, smooth meadow-grass, slender speedwell, with areas of bulbous buttercup, glaucous sedge and cuckooflower.	New	Grade 2	<p>The northern part of the site comprised intensively managed and used sports pitches of low ecological value. It is not clear if these were present in 2005 from the previous descriptions, although amenity grassland was identified as present in 2005. It is recommended that these parcels are not designated.</p> <p>The southern area provides a mosaic of habitats, including neutral grassland, roughland and scattered trees, which although not of high value in their own right, provide opportunities for wildlife in a particularly urban area, and in particular providing access to nature for local communities. The habitat character is similar to that recorded in 2005.</p> <p>Recommend designation of part of the site as a New SINC of Local value.</p>	4.1
12	Hitherbroom Park	HiBI 11	The park partly comprises reclaimed derelict land, opened in 2003, with a high diversity of plants, including some nationally rare species. The diverse range of habitats consists of secondary woodland, scattered trees, scrub, planted shrubbery, hedge, herb-rich semi-improved neutral grassland, ruderal-rich rough grassland, amenity grassland, bare soil, tall herbs, wet marginal vegetation, seasonal ponds and running water. The area supports a high diversity of birds, including regular records for pheasant, snipe, kingfisher, skylark, whinchat, mistle thrush, sedge, reed and willow warblers, linnet, redpoll, meadow pipit, hobby, bullfinch, reed bunting and common sandpiper. Grass snakes also occur at the site and five nationally scarce water beetles have been recorded from the seasonal ponds in the north.	Addition	Grade 1	The site has been considerably extended and the name changed to reflect current use. A small stream with largely natural banks runs eastward through Hitherbroom Park to meet the Yeading Brook in the Country Park. The nature conservation management plans of these sites should be integrated with respect to the watercourse.	New	Local	<p>Hitherbroom Park is a separate site to the Minet Country Park, relatively isolated from the Country Park by roads and development. It is also of a reduced value to the Country Park as a result of its size and isolation, and relatively low habitat diversity. However, it is of value in its own right, supporting a relatively diverse habitat mosaic in a small area, and providing access to nature for the local community, particularly associated with the small stream and associated habitats. It is therefore recommended that this site is designated as a SINC, but that's its value is recognised as separate to the County Park.</p> <p>Recommend designated as a separate site to Minet Country Park, as a New SINC of Local value.</p>	1.16
13	Victoria Road Rail Banks	HiBII 43		New	Grade 2	Comprising secondary woodland, scattered trees, scrub, semi-improved neutral grassland, ruderal and ditches. An extensive area of scrub and trees around a rail junction and surrounding a waste-transfer station, which is excluded from the site. Common hawthorn, bramble and blackthorn dominate, with some young pedunculate oaks and grey willow. There are diverse roughland and ruderal habitats, with goat's rue, stone parsley, ground ivy and patches of false oat-grass, stinging nettles and hedge mustard. Great willowherb, bittersweet and hard rush occur in seasonally damper areas at the bases of the embankments and cuttings. The site provides extensive shelter, likely to be used by birds and mammals. The extensive eco-	New	Grade 2	<p>Viewed from the train, the site seems similar to previous with some minor boundary realignments suggested given amendments to service yards.</p> <p>Recommend for designation as a New SINC of Borough Grade 2 value.</p>	17.89

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
						clines, sparsely vegetated bare areas, scrub and damper habitats are likely to be inhabited by a wide range of invertebrates.				
14	Beeches			Addition	Grade 1		Extension	Grade 1	Series of parcels, including those with no access and those which did not appear to support particular value with frequent disturbance and fly-tipping. These should not be subject to designation. Remaining parcels along the River Pinn and Fray's River provided potentially valuable wildlife corridor, including as a link between existing designated areas. Recommend for designation as extension, Borough Grade 1	7.6
15	Home Covert, Lowdham Field and Pole Hill Open Space	HiBII 52		New	Grade 2		Remove	Remove	Currently supports minimal ecological interest, with regularly mown amenity grassland for sports and recreational use. Treelines do pass through the site but these do not provide sufficient value in their own right to warrant designation, with many tree and hedge lines present in the vicinity to the east which are of greater value given associated habitats. The site could be significantly enhanced through relaxation of mowing of grassland areas, in particular alongside the treelines, which would improve connectivity between two existing SINC's. If this is taken forward, the site should be reconsidered for designation during the next SINC review. Recommend for removal.	N/A

16	Lower Colne	M 059	Habitats adjacent to or in close proximity to the river include herb-rich semi improved neutral grassland, scattered trees, orchard, standing water, reedbed, swamp, hedge, ditch, amenity grassland, scrub, tall herbs and bare soil. Considered one of the finest river systems in London. The rivers originate as chalk streams and support a diverse aquatic and marginal flora, including several plants with a restricted London distribution. Among these are the nationally declining river water dropwort <i>Oenenthe fluviatilis</i> , unbranched bur-reed <i>Sparganium emersum</i> , great yellow-cress <i>Rorippa amphibia</i> , bladder sedge <i>Carex vesicaria</i> , arrowhead <i>Sagittaria sagittifolia</i> , narrow-leaved water-plantain <i>Alisma lanceolatum</i> and common water-crowfoot <i>Ranunculus aquatilis</i> . Elsewhere in the site is London's only native population of the specially-protected pennyroyal <i>Mentha pulegium</i> . The rivers and surrounding habitat also support a diverse range of invertebrates and fish, water vole and kingfishers.	Addition	Grade 1	It is proposed to add three, possibly four areas, totalling 25ha: The Hills, Harmonds Moor: A large area of rolling grassland; seeded with native wildflowers and grazed to retain diversity. Frequent wet areas and ditches support wetland plants, including blue water speedwell <i>Veronica anagallis-aquatica</i> , and brooklime <i>V. beccabunga</i> . Invertebrates include the localised lesser marsh grasshopper. Bateman's Orchard: An old orchard which supplied a jam factory. Old fruit trees including apple, plum and quince are present. The sward supports occasional crested hair grass <i>Koeleria macrantha</i> , and sweet briar <i>Rosa rubiginosa</i> . The pond contains a high number of emergent plants including common reed <i>Phragmites australis</i> , reed canary-grass <i>Phalaris arundinacea</i> , and flowering rush <i>Butomus umbellatus</i> . Swan Lake: Part of the landscaping around British Airways offices, with abundant alder <i>Alnus glutinosa</i> , crack willow <i>Salix fragilis</i> , dense stands of common reed, great redmace <i>Typha latifolia</i> , and occasional water cress <i>Rorippa nasturtium-aquaticum</i> . Longfordmoor, north of Mad Bridge: A large area grassland alongside the Wraysbury River with a wide range of plants in spite of abuse from motorcyclists and fly-tippers. Species scarce in London include spotted medick <i>Medicago arabica</i> , common stork's-bill <i>Erodium cicutarium</i> and chicory <i>Cichorium intybus</i> . A wet area in the south-east corner, dominated by lesser pond- sedge <i>Carex acutiformis</i> , adds to the habitat diversity of the site. The discovery of a dead brown hare indicates that this species may occur. Hillingdon Council is soon to take over management of this area, with nature conservation a priority. We remain unconvinced that the last area warrants inclusion in the site.	Extension	Grade 1	In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and fly-tipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport. Recommend majority for designated as extension, Borough Grade 1 value	95.34
17	Uxbridge and Hillingdon Cemeteries	HiBII 41		New	Grade 2	Composed of semi-improved neutral grassland, vegetated walls and tombstones, tall herbs, scattered trees and secondary woodland. A good quality site with areas of herb-rich grassland, including mouse-ear hawkweed, burnet saxifrage, germander speedwell, and yarrow, with a sward dominated by red fescue. There is a good cover and variation of lichens and bryophytes on the gravestones. Scattered trees include yew, holly, common lime, monkey puzzle, other conifers and an area of broad-leaved woodland consisting of pedunculate oak, ash, sycamore, elder rhododendron.	New	Grade 2	In general agree with previous assessment, with a diverse range of amenity habitats present. The grassland seemed to be more regularly mown than previously recorded with species diversity not evident at the time of the update survey. This may simply have been due to recent mowing. Recommend designation as New SINC, Borough Grade 2 value	7.74
18	Duke of Northumberland's River at Two Bridges Farm	M149		Addition	Grade 1		Extension	Grade 2	Site along river supporting a good diversity of habitats and connecting two existing SINCS. Grade 2 designation recommended in accordance with existing designation. Recommend designation as extension, Borough Grade 2	1.15

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
19	Stockley Park Lakes and Meadows	HiBII 50		New	Grade 2		New	Grade 2	Diverse range of habitats, with semi-improved grassland and scrub habitats along the Grand Union Canal, and a series of ponds/lakes supporting marginal habitats with grassland and scattered trees adjacent. Agree with previous recommendations, although recommend extending further to include other ponds/lakes. A single field further to the east should be removed as this comprised short grazed horse pasture with limited ecological value evident. Recommend designation as New SINC, Borough Grade 2 value.	11.59
20	Summerhouse Lane			Addition	Grade 1		Remove	Remove	Comprised a series of parcels, including extended gardens, areas under development and small parcels of common and widespread habitat along towpaths. Recommend for removal.	N/A
21	Crane Lane Gravel Workings			New	Grade 2		Remove	Remove	Site was not accessible at the time of survey and a SINC designation cannot therefore be supported. This does not necessarily mean that there are no features of ecological value. The site should be monitored and included as part of the next SINC review.	N/A
22	Medipark Site, Harefield	HiBI 15		Addition	Grade 1	Former grounds of a demolished hospital building, comprising a mosaic of species-rich neutral to calcareous grassland, scrub, marginal secondary woodland, ruderal, roughland, bare artificial and native broadleaved woodland. Areas of the grassland support a good sized population of bee orchid <i>Ophrys apifera</i> , as well as occasional pyramidal orchid <i>Anacamptis pyramidalis</i> , common broomrape <i>Orobanche minor</i> , glaucous sedge <i>Carex flacca</i> , grass vetchling <i>Lathyrus nissolia</i> , and dwarf gorse <i>Ulex minor</i> ; all of which have a restricted distribution within the borough. The invertebrate fauna is likely to be of interest and includes the nationally scarce Roesel's bush-cricket <i>Metrioptera roeselii</i> .	New	Grade 1	Agree with previous assessment. Although at the time of the survey orchid species could not be located, the grassland habitats were clearly species-rich and supported high invertebrate abundance, including grasshoppers, butterflies and other pollinators. Its value was as a grassland site, and although adjacent to Old Park Wood SSSI (ancient woodland) it was considered more appropriate to designate this as a separate site. Recommend for designation as a New SINC of Borough Grade 1 value.	8.1
23	St Georges Meadows; Southlands Arts Centre	HiBII 40		New	Grade 2		New	Grade 2	Mosaic of amenity habitats of some value for wildlife at the local level with good public access. Recommend designation as New SINC of Local value.	2.04

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
24	Field Close Open Space Roughs	HiL 14		New	Grade 2	Composed of scattered trees, scrub, semi-improved neutral grassland and amenity grassland. An area set aside for wildlife linking Field Close Open Space with Bolton's Lane Open Space. This roughland is dominated by false oat-grass with scattered native scrub and native planted trees. A footpath with seating runs through the roughs, connecting the two open spaces. The grassland is rich in common flora, including red clover, scarlet pimpernel, cut-leaved cranesbill, common knapweed and dog-rose. Also included in this site (situated in Bolton's Lane Open Space) are two substantial clumps of mixed native and non-native scrub and small trees, including common hawthorn and hazel.	New	Grade 2	Previous assessment remains broadly accurate. Mosaic of habitats of some value at the local level with good public access. Recommend designation as New SINC of Local value.	1.5
25	Summerhouse Lane Chalkpit			Addition	Grade 1		Remove	Remove	Very dense area of secondary woodland of limited value, with frequent litter and poor access, providing limited opportunities for wildlife and the local community. Higher value habitats present in local area. Recommend for removal.	N/A
26	The Dairy Farm, Harefield			Extension	Grade 2		Extension	Grade 2	Area of relatively diverse semi-improved neutral grassland associated with hedgerows, and providing natural extension to adjacent SINC. Recommend as extension, Borough Grade 2	0.46
27	Mount Vernon	HiBII 29		Addition	Grade 1	Semi-improved neutral grassland, ruderal, hedges, roughland and scattered trees. The grazing fields to the south of the hospital comprise mainly false-oat grass, with some Yorkshire fog, cat's-tail and tufted hair-grass. Other flora includes red clover, autumn hawkbit and creeping cinquefoil. The broad native hedgerows include blackthorn, hazel, common hawthorn, dogwood and occasional crab-apple. This site includes scrub with scattered trees and a partly overgrown footpath on the south margin of the hospital. The overgrown roughland meadow to the east of the hospital appears to be un-landscaped ground, with abundant false oat-grass, cock's foot, bramble, stinging nettle and broad-leaved dock. Trees include crack willow, scots pine, pedunculate oak and hawthorn.	Extension	Grade 1	Larger parcel to south of Mount Vernon hospital did not appear to warrant designation given relatively species-poor grassland. Hedgerows and treelines found on site comprise relatively common habitats in the wider area. A second linear parcel to the south included mature trees/hedgerow which would provide a corridor linking existing designated areas. Recommend designation of smaller, linear parcel as extension, Borough Grade 1.	0.94
28	White Heath Farm and Harefield Grove	HiBII 14		New	Grade 2	Composed of native broad-leaved woodland, hedgerow, semi-improved and improved grassland, arable, roughland, running water and scrub. The site is in close proximity to the grand Union Canal and surrounding wetlands. The site maintains its rural character with species-rich hedgerows that likely form ancient field boundaries. There are small species-rich copses, including Cooks Wood, Watts Common and a shaw alongside a stream. Watts Common has a generally species-poor ground flora, however, locally scarce lesser spearwort and water-pepper can be found here.	Remove	Remove	Site was not accessible at the time of survey and a SINC designation cannot therefore be supported. This does not necessarily mean that there are no features of ecological value. The site should be monitored and included as part of the next SINC review.	N/A

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
29	Hill End Pond	HiBII 27		Addition	Grade 1	This is a small pond surrounded by willows <i>Salix spp.</i> , which were pollarded a few years ago. Frequent hawthorn <i>Crataegus mongyna</i> , and some elder <i>Sambucus nigra</i> , are growing in the drier mud. This drying out has been exacerbated by the accumulation of leaf litter and will eventually succeed to dry land if suitable management is not undertaken. The shading by the tree canopy has lead to a low abundance of plants when compared to reports from 1993 surveys. Great reedmace <i>Typha latifolia</i> , and soft rush <i>Juncus effusus</i> , are frequent, with occasional yellow flag iris <i>Iris pseudacorus</i> , and bitter-sweet <i>Solanum dulcamara</i> , and rarely hemlock water-dropwort <i>Oenanthe crocata</i> . There are also areas of grasses and tall herbs, including Yorkshire fog <i>Holcus lanatus</i> , cock's foot <i>Dactylis glomerata</i> , herb robert <i>Geranium robertianum</i> , and stinging nettle <i>Urtica dioica</i> . The pond appears to be popular with the local community.	Remove	Remove	Pond dry at the time of the survey, with vegetation not suggestive of particular ecological value. This appears to be continued declining condition as identified in 2005. The pond could be enhanced through dredging and removal of overshadowing. Should enhancement works be undertaken, the pond should be monitored and designation considered during the next SINC review should restoration be successful. Recommended for removal.	N/A
30	River Pinn Corridor near Northwood Hill			Addition	Grade 1		New	Grade 1	Woodland corridor along the River Pinn. Potentially valuable ecological corridor in combination with other designated sections. Recommend designation as New SINC, Borough Grade 1.	2.13
31	River Pinn Corridor near Eastcote	Hi.L 02	The site consists of riverine, secondary woodland, scrub, scattered trees, semi-improved neutral grassland, amenity grassland, tall herbs and bare soil. To the east, Cheney Street Open Space is an area of rough grassland encircled by trees and scrub with the River Pinn flowing along the south-east margin. Between this space and the new site, the River Pinn flows through Long Meadow which comprises a mosaic of copses, scrub, rough and amenity grassland. The river appears to have a good connectivity of tree and scrub coverage throughout. A good diversity of butterflies, damselflies and birds have been recorded (common species).	Extension	Grade 2	The site is extended to take in woodland, scrub, the river corridor in the south section of Haydon Hall Park and c.30 large scattered pedunculate oaks <i>Quercus robur</i> , near its north margin. The south section is predominately mixed native and non-native woodland, interspersed with wide bare-earth paths in <i>de facto</i> use by BMX riders. Alongside the ruderal flora and highly disturbed areas of the woodland floor, wood sedge <i>Carex sylvatica</i> , and remote sedge <i>Carex remota</i> , can be found along with ramsons <i>Allium vineale</i> , and lords-and-ladies <i>Arum maculatum</i> . The river itself flows through shade and speckled wood butterflies occur here. Much of the river corridor on its subsequent route westwards to Elmbridge drive is paralleled by a tarmac footpath and this section is known as Riverside Walk. It runs in the shade of hawthorn <i>Crataegus monogyna</i> , silver birch <i>Betula pendula</i> , alder <i>Alnus glutinosa</i> , and large pedunculate oaks. Dense stands of cow parsley <i>Anthriscus sylvestris</i> , grow by the footpath, which is in heavy use as an access route to the adjacent school. Shining cranesbill <i>Geranium lucidum</i> and wood speedwell <i>Veronica Montana</i> , grow here, while grey wagtails (an amber list species) use the exposed river sediments.	New	Grade 1	Agree with previous assessment. Range of habitats form corridor along the River Pinn. Potentially valuable ecological corridor in combination with other designated sections. One of previously identified parcels appears to have been created in error with no connection to the river corridor and should be removed. Recommend designation as New SINC, Borough Grade 1.	4.01

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
32	River Pinn Corridor at Swakeleys Park and Riverside Walk	HiBII 31		Extension	Grade 2		New	Grade 1	Series of parcels supporting a diverse range of habitats along the River Pinn, including public open spaces. Potentially valuable ecological corridor in combination with other designated sections. Recommend designation as New SINC, Borough Grade 1.	17.65
33	St Mary's Wood End	HiL 01		Extension	Grade 2		Remove	Remove	Highly ornamental garden with minimal ecological value. Unclear why previously suggested for designation in 2005. Recommend for removal.	N/A
34	River Pinn and Manor Farm Pastures	HiBII07		Extension	Grade 2	Composed of semi-improved neutral grassland, secondary woodland, running water, tall herbs, native hedge, scrub, scattered trees, bare soil and ruderal. The river is generally lined by trees and shrubs with some open areas dominated by bramble and nettles. The heavy shade and competition has led to a lack of aquatic and wetland plants, except for the introduced species, Japanese knotweed, giant hogweed and Himalayan balsam. Two of the fields to the west of the river are grazed by horses, while the rest are either mown infrequently or have been left unmanaged for a year or so. These tend to be fairly herb-rich. Several species of bird occur, including warblers, long-tailed tit and robin. This is probably of value for a wide range of taxa so is included as an extension of HiBII 07. To the north, the defunct Pield Heath Nursery comprises a number of horse-grazed paddocks on both sides of the river with a diverse mosaic of habitats. Winter flocks of chaffinch and greenfinch occur here along with dunnock and wren.	Extension	Grade 2	Sections of land adjacent to existing designations, including along River Pinn, warrant extension with grassland habitat supplementing the river corridor. Larger northern parcel should be considered as distinct site given character (site 36) as should area to east (site 37). Recommend part for extension, Borough Grade 2.	1.77
35	Ruislip Lido		Bordered by Ruislip Wood NNR, which is the largest stretch of woodland in Greater London. The NNR contains Park Wood, Copse Wood, Mad Bess Wood and Bayhurst Wood. Predominantly species-rich ancient woodland with some acid and neutral grassland, ponds, streams and marshland. See Ref. M9 in the blue Nature Conservation in Hillingdon Handbook for more info on the reserve.	Addition	Grade 1		Extension	Grade 1	Diverse mosaic of habitats surrounding the Ruislip Lido, with excellent public access and facilities. Habitats complement the adjacent designated sites. Agree with previous assessment. Recommend for extension, Metropolitan Grade.	24.71

		Summary of existing SINC designation (if applicable; for extensions. Source: GLC, 1988)		2005 Survey and Assessment (if available; Source: GLA 2005)			2015 Update Survey and Assessment			
Map label	Name (updated 2015)	Ref.	Original SINC description	Type	Grade	Description of New/Extension	Type	LBH Grade	Discussion (including level of designation)	Size (ha)
36	Former Pield Heath Nursery			Extension	Grade 2	Composed of semi-improved neutral grassland, secondary woodland, running water, tall herbs, native hedge, scrub, scattered trees, bare soil and ruderal. The river is generally lined by trees and shrubs with some open areas dominated by bramble and nettles. The heavy shade and competition has lead to a lack of aquatic and wetland plants, except for the introduced species, Japanese knotweed, giant hogweed and Himalayan balsam. Two of the fields to the west of the river are grazed by horses, while the rest are either mown infrequently or have been left unmanaged for a year or so. These tend to be fairly herb-rich. Several species of bird occur, including warblers, long-tailed tit and robin. This is probably of value for a wide range of taxa so is included as an extension of HiBII 07. To the north, the defunct Pield Heath Nursery comprises a number of horse-grazed paddocks on both sides of the river with a diverse mosaic of habitats. Winter flocks of chaffinch and greenfinch occur here along with dunnock and wren.	New	Grade 2	No direct access although viewing from adjacent land the site appeared to support similar habitats as previously although with greater scrub colonisation of grasslands. Habitat mosaic appears to include semi-improved neutral grassland, scrub, scattered trees, ruderal communities and the River Pinn corridor. Site likely to be of value for bird species, particularly passerines, given scrub habitats and low disturbance. Area to East of River Pinn identified as an area for the study of nature by the University. Recommend designation as a New SINC of Borough Grade 2 value.	10.7
37	The Grove			Extension	Grade 2	Composed of semi-improved neutral grassland, secondary woodland, running water, tall herbs, native hedge, scrub, scattered trees, bare soil and ruderal. The river is generally lined by trees and shrubs with some open areas dominated by bramble and nettles. The heavy shade and competition has led to a lack of aquatic and wetland plants, except for the introduced species, Japanese knotweed, giant hogweed and Himalayan balsam. Two of the fields to the west of the river are grazed by horses, while the rest are either mown infrequently or have been left unmanaged for a year or so. These tend to be fairly herb-rich. Several species of bird occur, including warblers, long-tailed tit and robin. This is probably of value for a wide range of taxa so is included as an extension of HiBII 07. To the north, the defunct Pield Heath Nursery comprises a number of horse-grazed paddocks on both sides of the river with a diverse mosaic of habitats. Winter flocks of chaffinch and greenfinch occur here along with dunnock and wren.	Extension	Grade 2	Sections of land adjacent to existing designations warrant extension with grassland habitat supplementing woodland habitats. Larger northern parcel should be considered as distinct site given character (site 36) as should area to west along River Pinn (site 34). Recommend part for extension, Borough Grade 2.	0.78

Comments	

Changes since last survey

Changes: Significant

Comments: No access. Viewed from the road, appears to remain an active minerals site, with apparent changes to areas being worked and those areas vegetated. Unlikely sand heaps remain.

Species Richness

Species richness:

SiteID: SINC 1 (a) Grade: Grade 1 ID on Maps: 2d SINC No: SINC 1 (a)

Site name: Haste Hill and Northwood Golf Courses, and Northwood Cemetery Status: New

Nature conservation value

Nature conservation value (surveyor's personal opinion):

A good open space for the public. Golf courses and cemetery as previously described. Habitats not particularly unusual in their own right, but the mosaic of habitats likely to support a wide range of wildlife particularly given adjacent designated sites.

Additional comments:

Species Richness

Species richness:

SiteID: SINC 1 (b) Grade: Grade 1 ID on Maps: 3 SINC No: SINC 1 (b)

Site name: St Vincent's Hospital Meadow Status: New

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

Low conservation value, however it could provide beneficial access to nearby designation. Maintaining the same management of the site will continue to improve species diversity and recovery from previous soil disturbance. But does not appear to warrant designation.

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

Important site as it is part of a wider green corridor. Could be beneficial to manage an area of amenity grassland for local wildlife. Bat roost potential in trees located on site.

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

A range of habitats in a small area. Important link to other habitats. Generally agree with previous assessment, with two parcels complementing to connectivity along the stream, and two providing valuable habitat as extensions to existing fields. A further two parcels could not be accessed.

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Series of open spaces supporting a diverse habitat mosaic along watercourses (Yeading Brook and Grand Union Canal) providing a potentially valuable wildlife corridor between other existing SINC. Includes a large parcel associated with Minet Country Park previously suggested along with Hitherbroom Park. These should be treated as separate designations (see site 12).

Species richness:

SiteID: SINC 5 Grade: Grade 1 ID on Maps: 10d SINC No: SINC 5

Site name: Yeading Brook & Minet Country Park Status: Extension

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Series of open spaces supporting a diverse habitat mosaic along watercourses (Yeading Brook and Grand Union Canal) providing a potentially valuable wildlife corridor between other existing SINC. Includes a large parcel associated with Minet Country Park previously suggested along with Hitherbroom Park. These should be treated as separate designations (see site 12).

Species richness:

SiteID: SINC 5 Grade: Grade 1 ID on Maps: 10g SINC No: SINC 5

Site name: Yeading Brook & Minet Country Park Status: Extension

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Series of open spaces supporting a diverse habitat mosaic along watercourses (Yeading Brook and Grand Union Canal) providing a potentially valuable wildlife corridor between other existing SINC. Includes a large parcel associated with Minet Country Park previously suggested along with Hitherbroom Park. These should be treated as separate designations (see site 12).

Additional comments:

Species Richness

Species richness:

SiteID: SINC 5 Grade: Grade 2 ID on Maps: 11b SINC No: SINC 5

Site name: Cavendish Recreation Ground Status: New

Nature conservation value

Nature conservation value (surveyor's personal opinion):

No ecological value. Northern part comprises sports pitches which does not present ecological value, whilst southern area provides a mosaic of habitats with good public access.

Species Richness

Species richness:

SitelD: SINC 6 Grade: Grade 1 ID on Maps: 12 SINC No: SINC 6

Site name: Hitherbroom Park Status: New

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Hitherbroom Park is a separate site to the Minet Country Park and should be treated as such. Small stream running through the park provides some wildlife interest in the park with public access.

Species Richness

Species richness:

SiteID: SINC 6 Grade: Grade 2 ID on Maps: 13a SINC No: SINC 6

Site name: Victoria Road Rail Banks Status: New

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Undisturbed area of brambles and buddleia that is isolated by railway tracks. Viewed from the train, the site seems similar to previous with some minor boundary realignments suggested given amendments to service yards.

Nature conservation value

Nature conservation value (surveyor's personal opinion):

No conservation value. Series of parcels, including those with no access and those which did not appear to support particular value with frequent disturbance and flytipping. These should not be subject to designation. Remaining parcels along the River Pinn and Fray's River provided potentially valuable wildlife corridor, including a s a link between existing designated areas.

Nature conservation value

Nature conservation value (surveyor's personal opinion):

No conservation value. Series of parcels, including those with no access and those which did not appear to support particular value with frequent disturbance and flytipping. These should not be subject to designation. Remaining parcels along the River Pinn and Fray's River provided potentially valuable wildlife corridor, including a s a link between existing designated areas.

Comments	

Changes since last survey

Changes: Significant

Comments: In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and flytipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport.

Comments	

Changes since last survey

Changes: Significant

Comments: In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and flytipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport.

Comments	

Changes since last survey

Changes: Significant

Comments: In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and flytipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport.

Comments	

Changes since last survey

Changes: Significant

Comments: In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and flytipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport.

Comments	

Changes since last survey

Changes: Significant

Comments: In general agree with previous assessment, with a variety of sites located along the River Colne corridor providing an important wildlife corridor and diverse range of habitats. Certain parcels did not support particular ecological value, including areas of horse pasture, significant disturbance and flytipping. Additional areas added to previously identified extension, including biodiversity zones which appear to have been enhanced by Heathrow Airport.

Species Richness

Species richness:

SitelD: SINC 10 Grade: Grade 1 ID on Maps: 20 SINC No: SINC 10

Site name: Summerhouse Lane Status: Extension

Nature conservation value

Nature conservation value (surveyor's personal opinion):

The canal is an important feature providing a link to the wider landscape. However, site itself comprised a series of parcels, including extended gardens, areas under development and small parcels of unremarkable habitat along towpaths.

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Larger parcel to south of Mount Vernon hospital did not appear to warrant designation given relatively species-poor grassland. Hedgerows and treelines found on site relatively common habitats in the wider area. A second linear parcel to the south included mature trees/hedgerow which would provide a corridor linking existing designated areas.

Species Richness

Species richness:

SitelD: SINC 14 Grade: Grade 1 ID on Maps: 29 SINC No: SINC 14

Site name: Hill End Pond Status: New

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

Due to lack of management the pond had completely dried up. Minimal conservation value.

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

Agree with previous assessment. Range of habitats form corridor along the River Pinn. Potentially valuable ecological corridor in combination with other designated sections. One of previously identified parcels appears to have been created in error with no connection to the reiver corridor and should be removed.

Nature conservation value

Nature conservation value (surveyor's personal opinion):

Sections of land adjacent to existing designations, including along River Pinn, warrant extension with grassland habitat supplementing the river corridor . Larger northern parcel should be considered as distinct site given character (site 36) as should area to east (site 37).

Site name: Former Pield Heath Nursery Status: New

Nature conservation value

Nature conservation value (surveyor's personal opinion):

No direct access although viewing from adjacent land the site appeared to support similar habitats as previously although with greater scrub colonisation of grasslands. Habitat mosaic appears to include semi-improved neutral grassland, scrub, scattered trees, ruderal communities and the River Pinn corridor. Site likely to be of value for bird species, particularly passerines, given scrub habitats and low disturbance. Area to East of River Pinn identified as an area for the study of nature by the University

Site name: The Grove Status: Extension

Nature conservation value

Nature conservation value
(surveyor's personal
opinion):

Sections of land adjacent to existing designations warrant extension with grassland habitat supplementing woodland habitats. Larger northern parcel should be considered as distinct site given character (site 36) as should area to west along River Pinn (site 34).
